

NEAEN FC

FEEDING CONVEYOR

The NEAEN FC feeding conveyor consists of a hopper, the size of which is determined by the product and the necessary output, and an inclined transporter, which ensures that the product is lifted and evenly transported to a place for further processing.

The volume of the hopper, the width of the conveyor, the angle of inclination, the necessary length and the size of the edges is determined individually depending on the customer's requirements.

The conveyor belt's speed can be optionally regulated with a frequency convertor.

The FC-series feeding conveyors can have a pivoting configuration. The material from which the conveyor belt is manufactured depends on the type of product (loose, sticky, with or without packaging,) and other factors. All parts except for the conveyor belt are manufactured from AISI304 stainless steel for the food industry.

The NEAEN FC feeding conveyor can be manufactured in a stationary or mobile version.

THE EMA EUROPE COMPANY HAS MORE THAN THIRTY YEARS OF EXPERIENCE IN THE DEVELOPMENT, DESIGN, AND MANUFACTURE OF INDUSTRIAL **EQUIPMENT FOR** **THERMAL FOOD PROCESSING**

The range of commercially available equipment includes continuous conveyor fryers and ovens, drum fryers, batch blanchers, and continuous drum and conveyor blanchers, defrosters, continuous and batch cookers both atmospheric and vacuum, scraped surface heat exchangers, and a wide range of auxiliary equipment such as washers, conveyors, pumps, homogenizers, and others.

Our company offers a complete cycle service from design of technology projects to the manufacturing of equipment of any complexity in our own production site, located in the heart of Europe, as well as the introduction of the equipment in operation, upholding the warranty and after-warranty service with our own service center.

Having much experience in the practical implementation of projects in the industrial processing of meat, fruit and vegetable products, semi-finished and other products, our company is ready to offer technological consultation, development of the production process of the project, equipment manufacturing, erection supervision, commissioning works, and further maintenance services to its customers.
